

There were subtle differences in how the website displayed across browsers. In Firefox, the H1 heading appeared slightly thinner and softer compared to the thicker, crisper version in Edge and Chrome. Overall, text rendering looked sharper in Edge and Chrome. I was surprised to find that Firefox displayed the entire website at a slightly smaller scale than the other two browsers. One noticeable difference in Edge was the appearance of the radio buttons—they were filled with gray, unlike the blue seen in Firefox and Chrome. Additionally, colors appeared more vibrant in Chrome than in Firefox or Edge.
